MI 0060

Zerostat-3 Anti-static Pistol. Neutraliserar statisk elektricitet.

1 300,00 kr st

Effective at neutralising static charges on virtually any surface without the need of sprays. The Zerostat 3 is highly rated for its ability to improve the sound quality of records and CDs by removing static. The Zerostat 3 incorporates a unique Piezo Crystal device which generates a positive electrical charge of ions with one gentle squeeze of the trigger, and a negative charge on release of the trigger so cancelling the charges on the disc. Constructed from durable hard plastic, it requires no batteries or refills and is a long lasting alternative to cleaning brushes.

MI 0075

SUPER EXSTATIC. Suverän skivborste. Både kolfiber och plysch. Avleder statisk elektricitet.

550,00 kr st

A highly effective solution to grime and dust inside the record groove. The carbon fibre filaments and a soft velvet cleaning pad remove the unwanted materials at a stroke leaving the groove clean, prolonging the life of both disc and stylus.

MI 0135

Carbon Fibre Record Brush. Skivborste med kolfibrer. När djupt ner i skivspåren. Tar bort damm och partiklar och minskar den statiska laddningen

200,00 kr st

The description says it all really. Operating on a flip/clean basis, the carbon fibre bristles get into your grooves and take out the dust, leaving a nice clean record. Helps to drain away static charge too. Once used, flip over the lid and it cleans the bristles for next time, whilst leaving a handy stand for your cleaner that keeps the carbon fibre protected. Great little product no turntable owner should be without! Made with carbon fibre bristles, the Audioquest record brush uses conductive carbon fibers to eliminate static electricity while removing dust and fine particles that can degrade your record's sound.

MI 0040

Duo pad skivborste som lyfter bort damm effektivt. Dubbelsidig.

150,00 kr pkt

The Milty Duo Pad is a tool of necessity for any vinyl enthusiast. The innovative double sided pad acts like magnet, so any dust, dirt and debris on the vinyl are picked up and absorbed. It works great on its own, or with any vinyl cleaning fluid. Removing all unhealthy material from a record helps remove background noise on records and gives back the playback quality you desire.

MI0040

Milty Exstatic Record Sleeves. Dessa skivfodral behåller skivorna antistatiska. 25-pack

200,00 kr set

Most records are positively charged with static electricity. This positive charge attracts dust and grime to the disc groove, resulting in clicks, crackle and unwanted surface noises and also accelerates deterioration of the stylus. These sleeves safely protect the disc inside the outer sleeve, reducing the positive charge, thereby releasing the dust.

**Milty - Isolerande fötter för signalkällor, försteg och slutsteg samt högtalare.**

## Milty FoculPods

**A**lso sold under the Deflex (on the packaging) and Spectra Dynamics (on the items themselves) brands, this product is nothing more than four squidgy feet in a packet. They're made of 'advanced polymer' (if it's not a softish grade of Sorbothane, it's something remarkably similar) and are 50mm in diameter and, unloaded, 20mm high. Each will support up to 10kg; a smaller version, the Polipod, is also available. They are, we suggest, an essential for every audiophile's accessories collection, not least because of the near limitless number of ways in which they can come in handy. Obviously the simplest application is to put one under each foot of your equipment and take advantage of their vibration-absorbing properties to give a little isolation. However, you can also site them elsewhere under the case, replacing or supplementing the fixed feet and damping vibrations in the bottom panel. Or put them under loudspeakers, or even on top of

something to damp case vibrations...

We tried several possibilities and while the results with speakers are admittedly unpredictable, they can also be positive so it's certainly worth a try. Both here and with electronics, the precise position of the FoculPods can be quite critical, making them a tweaker's delight. Get the positioning correct and the results may surprise you in their extent, with considerable gains in precision and subjective timing. At worst, there won't be much difference, but anyone can at least afford to give them a go. At the very

least, they're good for preventing equipment from sliding around on highly polished or glass surfaces! Buy a couple of sets and have a play – at this price you can't go wrong. **HFC**

### VERDICT

An amazingly useful device for isolating and damping all sorts of things. Worth trying or experimenting with almost any hi-fi component.
